

Salesforce Project Phase-1

Salesforce-Powered Online Grocery System

Phase 1: Problem Understanding & Industry Analysis

Problem:

Online grocery stores struggle to manage customer orders, data, and store operations effectively. They use many different systems that don't talk to each other. This leads to slow order picking, unhappy customers, and lost sales. They can't see all customer information in one place, which makes it hard to give good service.

Solution:

We will build a complete system on Salesforce to solve these problems. This system will bring together all online orders, customer information, and inventory data into one place. This will make the business run more smoothly and help them give customers a better shopping experience.

1. Requirement Gathering:

➤ Customers:

1. Transparent and Timely Order Updates.
2. Quick and Easy Access to Support.
3. Effortless Returns and Issue Resolution.

➤ Employees:

1. A Single, Intuitive Workspace.
2. Mobile Access to Key Features.
3. Clear Task Management and Automation.

➤ Inventory Manager:

1. Real-Time Inventory Visibility and Alerts.
2. Supplier and Product Management.
3. Inventory Movement and Analytics.

2. Stakeholder Analysis:

- **Primary Stakeholders:** Customers, Operations & Store Management, Pickers & Packers, Delivery Drivers.

- **Secondary Stakeholders:** Customer Service Agents, Inventory Managers, Marketing Team, Suppliers / Vendors.

3. Business Process Mapping:

Flow chart:

User Login --> Add Items to Cart --> Make Payment --> Data Stored in Salesforce Objects --> Account Creation Email --> Order Details Email.

4. Industry-Specific Use Case Analysis:

Problem in Online Grocery Management:

- **Fragmented Customer Data:** Customer information is scattered across different systems (e.g., e-commerce, customer support emails), making it impossible for staff to see a complete view of a customer's history. This leads to slow, uninformed service.
- **Inefficient Order Fulfillment:** Manual processes for picking, packing, and assigning deliveries are slow and prone to human error. This results in delayed deliveries and high rates of out-of-stock items.
- **Lack of Personalized Marketing:** The business cannot easily segment customers based on their purchase history or loyalty, leading to generic marketing emails that are ignored and a low rate of repeat business.
- **No Real-Time Operational Insight:** Managers lack real-time visibility into key metrics like sales figures, fulfillment times, and inventory levels, which hinders their ability to make data-driven decisions.

In Salesforce, how can we solve it:

- **Customer 360 View:** A single, unified record for each customer, providing staff with a complete view of their order history, loyalty points, and past support cases.
- **Automated Order & Fulfillment Flows:** Use Salesforce Flow to automate the entire order lifecycle—from a customer's click to final delivery—reducing manual tasks and speeding up the process.
- **Targeted Marketing & Loyalty Programs:** Use Salesforce Marketing Cloud to segment customers and create automated, personalized email campaigns and a custom loyalty program to drive engagement and retention.
- **Real-Time Dashboards & Reporting:** Create dynamic dashboards that provide managers with instant visibility into critical business numbers like sales, order fulfillment times, and inventory levels.

Salesforce Project Phase-2

Salesforce-Powered Online Grocery System

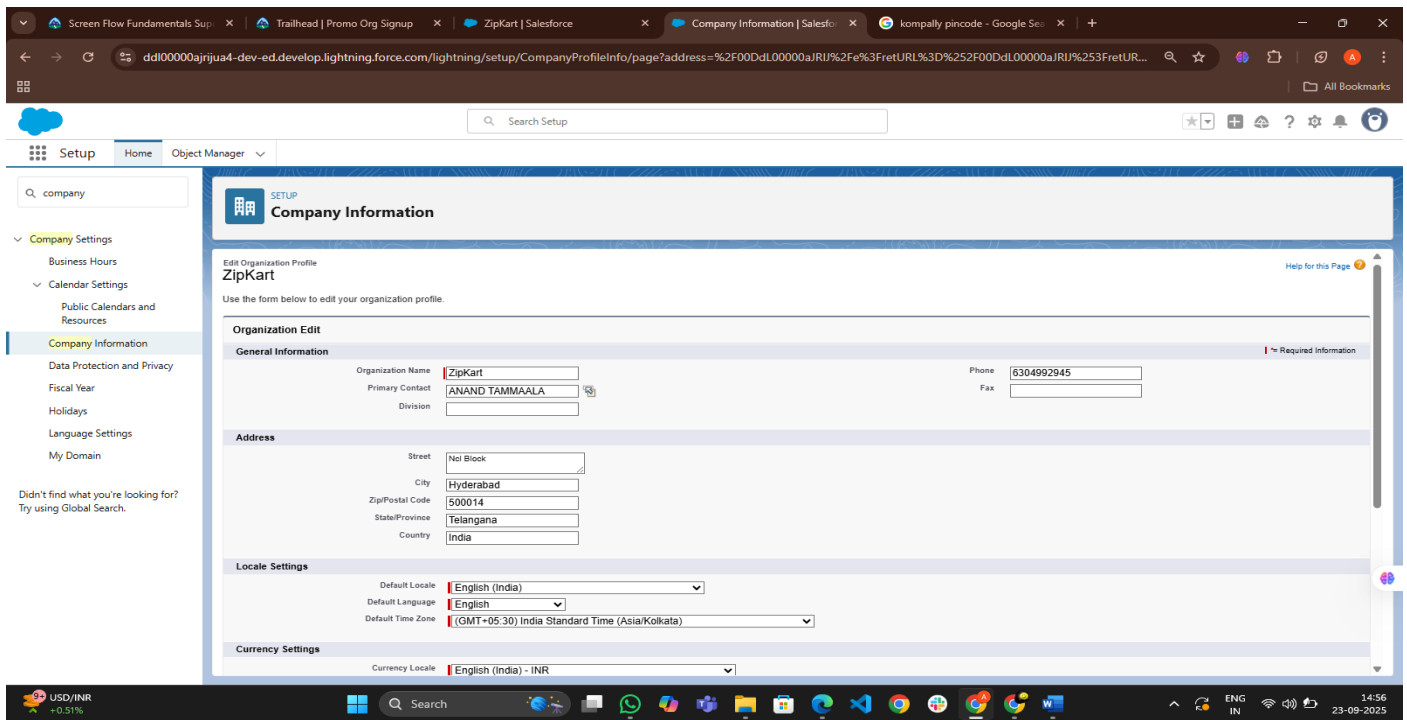

Phase 2: Org setup & Configuration

1. Salesforce Editions:

- For this project, the development and configuration will be performed within a Salesforce environment. Salesforce provides several editions tailored to different business needs, such as Enterprise, Unlimited, and Professional.
- To facilitate a cost-effective and full-featured development environment, I have utilized the **Developer Edition Developer Org**. This is a free, non-expiring organization specifically designed for building, testing, and deploying custom applications and functionality on the Salesforce platform. It provides a dedicated instance with the complete suite of development tools and features necessary for this project.

2. Company Profile Setup:

- Login to existing Salesforce org.
- Click on the Setup.
- In the Quick Find box, type Company Information and click on it.
- On the Company Information page, click on edit.
- Fill the details as below:
 1. Organization Name: ZipKart
 2. Primary Contact: ANAND TAMMAALA
 3. Street: Kompally Ncl (North Avenu)
 4. City: Hyderabad
 5. State: Telangana
 6. Country: India
 7. Default Locale: English (India)
 8. Default Currency: INR
 9. Default Time Zone: (GMT+05:30) India Standard Time (Asia/Kolkata)
 10. Click Save.

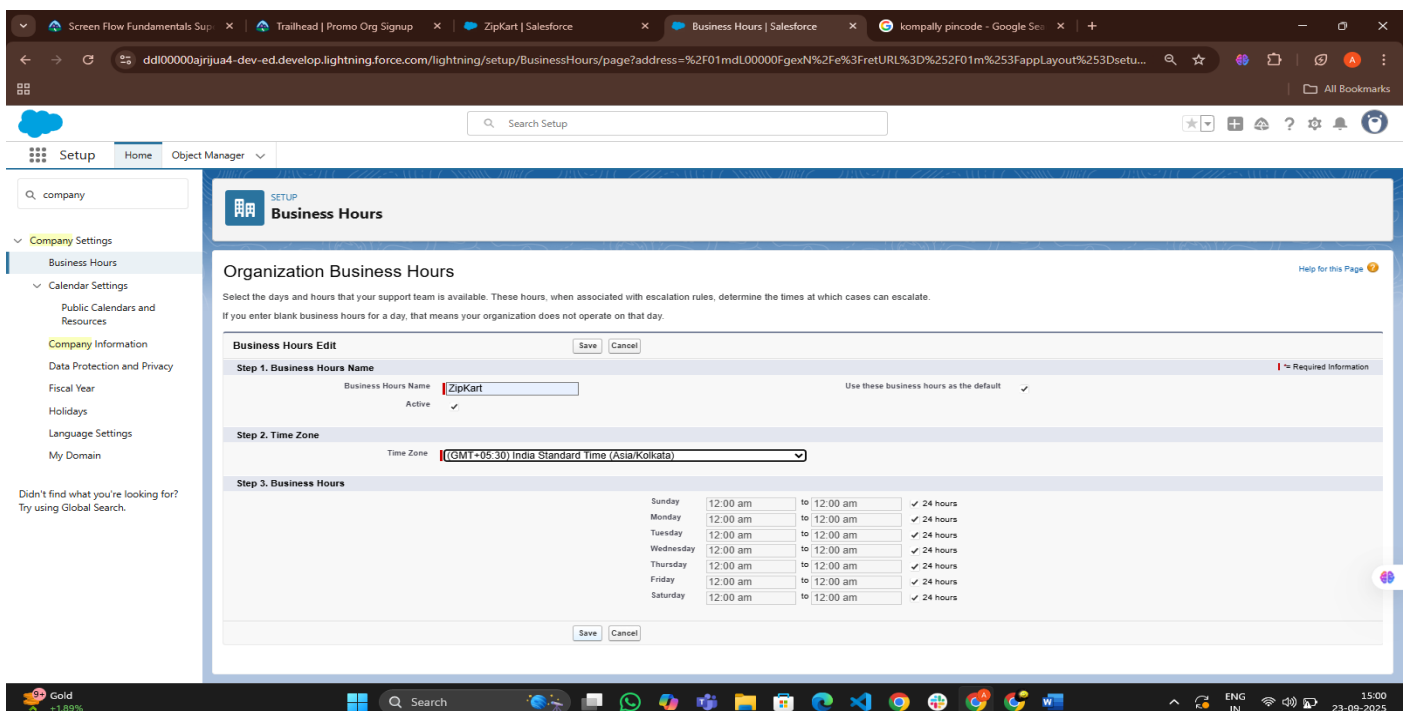

The screenshot shows the Salesforce Setup interface for 'Company Information'. The left sidebar contains a search bar and a list of settings: Company Settings, Business Hours, Calendar Settings, Public Calendars and Resources, Company Information (selected), Data Protection and Privacy, Fiscal Year, Holidays, Language Settings, and My Domain. The main content area is titled 'Company Information' and includes a 'Help for this Page' link. Below the title is a section 'Edit Organization Profile' with the text 'Use the form below to edit your organization profile.' The form is divided into several sections: 'General Information' (Organization Name: ZipKart, Primary Contact: ANAND TAMMAALA, Division, Phone: 6304992945, Fax), 'Address' (Street: Nel Block, City: Hyderabad, Zip/Postal Code: 500014, State/Province: Telangana, Country: India), 'Locale Settings' (Default Locale: English (India), Default Language: English, Default Time Zone: (GMT+05:30) India Standard Time (Asia/Kolkata)), and 'Currency Settings' (Currency Locale: English (India) - INR). The bottom of the screen shows a Windows taskbar with various application icons and a system clock indicating 14:56 on 23-09-2025.

3. Business Hours & Holidays:

1. Business Hours:

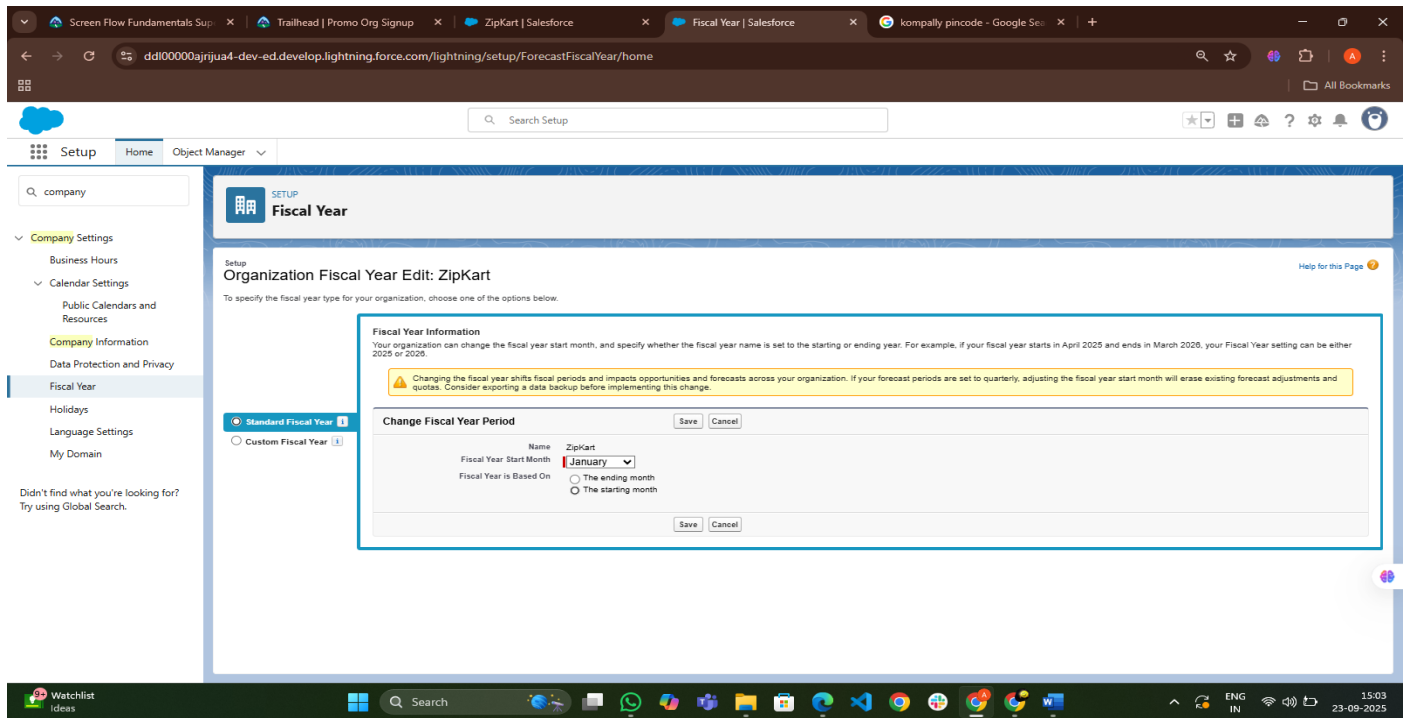

- Login to existing Salesforce org.
- Click on Setup.
- In the Quick Find box, type Business Hours and click on the Business Hours.
- Click New.
- Fill the details:
 1. Business Hours Name: Store 24*7 Hours
 2. Time Zone: (GMT+05:30) India Standard Time (Asia/Kolkata)
 3. Enable the Active.
 4. Set to all days that is Monday to Sunday.
 5. Click Save.

The screenshot shows the Salesforce Setup interface for 'Business Hours'. The left sidebar is similar to the previous screenshot, with 'Business Hours' selected under 'Company Settings'. The main content area is titled 'Business Hours' and includes a 'Help for this Page' link. Below the title is a section 'Organization Business Hours' with the text 'Select the days and hours that your support team is available. These hours, when associated with escalation rules, determine the times at which cases can escalate. If you enter blank business hours for a day, that means your organization does not operate on that day.' The form is divided into three steps: 'Step 1. Business Hours Name' (Business Hours Name: ZipKart, Active: checked), 'Step 2. Time Zone' (Time Zone: (GMT+05:30) India Standard Time (Asia/Kolkata)), and 'Step 3. Business Hours' (a table showing hours for each day of the week). The table has columns for the day, start time, end time, and a checkbox for '24 hours'. All days are set to 12:00 am to 12:00 am, and all '24 hours' checkboxes are checked. The bottom of the screen shows a Windows taskbar with various application icons and a system clock indicating 15:00 on 23-09-2025.

4. Fiscal Year Settings:

- Login to existing salesforce org.
- Click on the Setup.
- In the Quick Find box, type Fiscal Year and click on it.
- Fiscal Year Start Month: January
- Select the starting month.
- Click Save.

5. User Setup & Licenses:

1. User Setup:

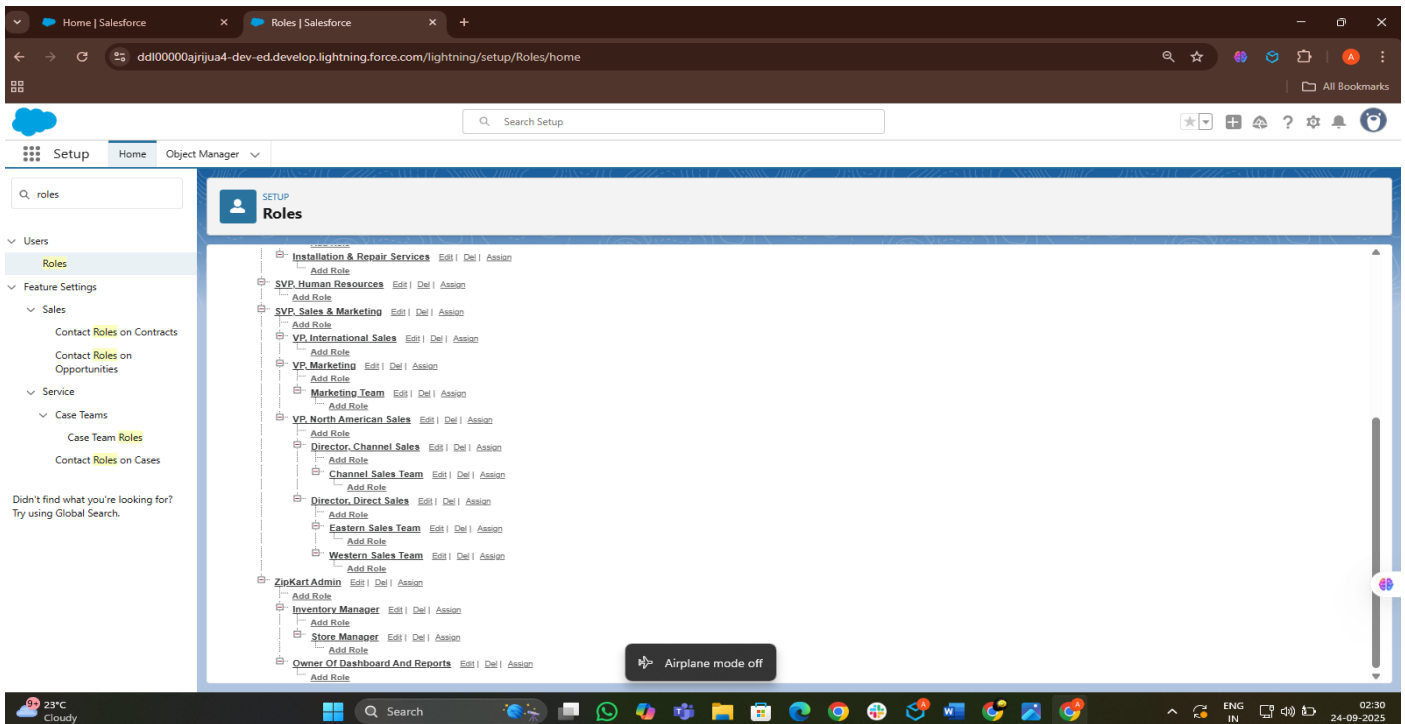

Create Roles:

1. In the Quick Find box, type Roles and click it.
2. Click on Setup Roles.
3. Click on Add Role to create a new Role.
4. Fill the details:
 - Label: ZipKart Admin
Role Name: ZipKart_Admin
Click on save.
 - Label: Inventory Manager
Role Name: Inventory_Manager
Click on save.
 - Label: Store Manager

Role Name: Store_Manager

Click Save.

- Lable: Owner Of DashBoard And Reports
Role Name: Owner_Of_DashBoard_And_Reports
Click Save.

2.Create Users:

1. In the Quick Find box, type Users and click it.
2. Click on New user.
3. Fill the details:

- First Name: ANAND
Last Name: TAMMAALA
Alias: ATAMM
Email: anandtammaala@gmail.com
License: Salesforce
Profile: System Admin
Click on save and new
- First Name : Venu
Last Name: Madhav
Alias: vmadh
Email: anandtammaala07@gmail.com
License: Salesforce Platform
Profile: Inventory Manager
Click on save and new
- First Name: Krishna
Last Name: Gund
Alias: kgund

Click on save and New.

-
- The screenshot displays the Salesforce Lightning Setup interface for user management. The browser's address bar indicates the URL: `https://dd100000ajrju4-dev-ed.develop.lightning.force.com/lightning/setup/ManageUsers/home`. The page layout includes a sidebar on the left with navigation options such as Setup, Home, Object Manager, and Users. The main content area, titled "All Users", provides a table of existing users. The table columns are Action, Full Name, Alias, Username, Role, Active, and Profile. The users listed include Chatter, Krishna, Gopal, Yashu, Anand, Guest, Integration, and Security. The bottom of the image shows a Windows taskbar with various application icons and a system clock indicating the time is 02:52 on 24-09-2025.
- | Action | Full Name | Alias | Username | Role | Active | Profile |
|--|-------------------|---------|---|--------------------------------|--------------------------|----------------------------------|
| Edit | Chatter, Eswari | Chatter | chatty00dd00000ajrju4-dev-ed@chatter.salesforce.com | | ✓ | Chatter Free User |

| Edit | User, Integration | integ | integration@00dd00000ajrju4-dev-ed | | ✓ | Analytics Cloud Integration User |
| Edit | User, Security | sec | insightssecurity@00dd00000ajrju4-dev-ed | | ✓ | Analytics Cloud Security User |

- Click on the Setup.
- In the Quick Find box, type Login Access Policies and click on it.
- Check the box “Administrations can log in as any user”.
- Click save.

For the purposes of this project, I have configured the organization to allow administrators to log in as any user. This is a crucial feature for troubleshooting and support.
